**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 4, 5, 6, 9, 10 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Andrews (US/5,983,156). See figure 4 and claims 1-4, 11, and 12
3. Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Kurse (US/6,112,151).
4. Kurse discloses a location-sensitive engine control system for use with an internal combustion engine, the system comprising: a position locating system (GPS) interfacing with control logic (central logic) that further interfaces with an engine control; the position locating system determining location coordinates for the engine and relaying the coordinates to the control logic; the control logic having an emissions map and comparing the coordinates to the map to determine corresponding emissions regulations which are converted to corresponding engine control settings that are relayed to the engine control; and the engine control adjusts the engine control settings to alter the engine operating parameters to comply with the emissions regulations. The control logic stores emissions data as an emissions log. the systems includes antenna connected to the control logic for transmitting emissions log information, and system

includes an antenna connected to the control logic for receiving emissions map updates. Moreover, Kurse states It will also be understood that the invention can be put into practice with various emission control devices, including spark timing changes with spark ignition engines, variable valve timing, variable exhaust gas recirculation, variable modes of operation of catalytic converters including selective catalytic reduction, water injection, variable fuel supply and other pollution control methods and devices as known in the prior art.

### ***Conclusion***

5. The remaining prior art made of record and not relied upon is pertinent to applicant's disclosure having transmitted maps for local areas.
